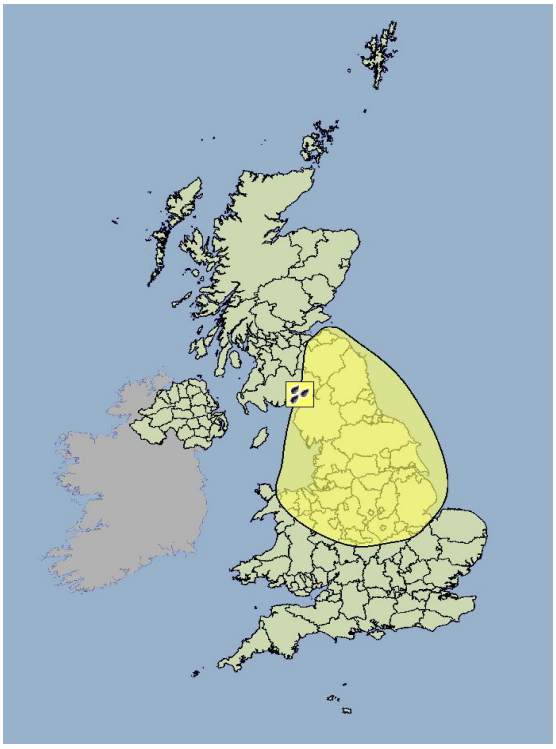
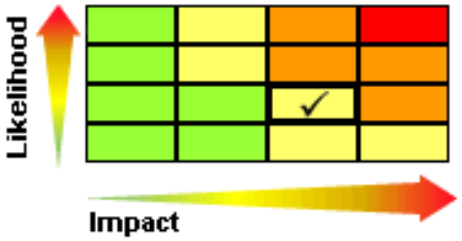
National Severe Weather Warning Service





Chief Forecasters Assessment
The situation is very finely balanced and most places will see little or no severe weather. However, there is potential for severe thunderstorms developing from late Wednesday afternoon and through the first half of the night - the greatest risk across northern England and the north Midlands.

This is an update to the original warning to shrink the yellow area slightly and increase the likelihood in the risk matrix.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:55 on Wed, 21st Jun 2017** until **02:00 on Thu, 22nd Jun 2017**

Further spells of rain, heavy and thundery at times, will affect parts of southern Scotland and northern England through the rest of Wednesday and into early Thursday.

There is a risk of more severe thunderstorms breaking out over parts of the Midlands, northern England and north Wales from late Wednesday afternoon onwards into Wednesday night, leading to torrential downpours, frequent lightning, very large hail and strong gusts of wind.

This could result in some disruption, more likely from late Wednesday afternoon, which may include sudden localised flooding of transport routes, homes and businesses. Frequent lightning in association with the heaviest rain may also temporarily disrupt power supplies, whilst damage from large hail could occur on a very localised scale. However, many places will likely miss the worst of the storms and see little or no impact.
